

WFWP Italy: Youth and artificial intelligence: educating & growing in digital future

Elisabetta Nistri

May 20, 2025

On May 20, at the Sala delle Bandiere of the European Parliament Office in Italy, the conference and "Youth and Artificial Intelligence: educating and growing in the digital future and" was held, promoted by WFWP Italy and the Il Valore del Femminile Association. The event brought together experts, institutions and representatives of the educational world to discuss the opportunities and challenges posed by AI in the education of the new generations.

Dr. Corazza, Head of the European Parliament Office in Rome, underlined the European Union and #39;s attention to the development of AI, highlighting the need to regulate its use to prevent it from prevailing over human decisions, unlike the United States, where similar constraints are lacking.

Elisabetta Nistri, President of WFWP Italy, expressed the need to reflect on the direction that AI is giving to our lives. and quot;AI can be a valuable help, but it is up to us whether it will become a tool for noble intentions or an amplifier of our flaws, and quot; she said. She also stressed the importance of transferring educational content through digital, given the propensity of young people towards this medium, but without neglecting the risks of the virtual world.

Virginia Vandini, President of Il Valore del Femminile, presented AI as an opportunity to overcome dualism and reconnect us to the sacred dimension of life.

She emphasized the importance of preserving what makes us human - intuition, emotion, and meaning-making - by calling ourselves and quot;emotional, collective, and spiritual intelligence. and quot; The conference highlighted the dual nature of AI: a powerful tool for progress, but also a source of educational and societal challenges. The key lies in the balance between innovation and human values, with a call for collective wisdom to steer technological development towards the common good.
