Until now, the fallen human mind and body have been fighting, and the proportions boiled together. That ratio was around 10 to 8. The environment the body is dealing with is in contact with the whole world, but there is only one way the mind has to deal with. The human body facing the fallen world has been occupied by the environment every moment, but the mind came out along a path. That is why the real world is cracking down on the consequences that appear.

When you try to do bad things, fear comes to your heart. Then, when you do that, what you have accumulated so far collapses. In view of this, the mind interferes with the actions of the body from the beginning and the beginning, but at the end, it is controlled by the body. That is why it is about 10 to 8 in terms of external ratio, but the environment always pushes the mind out of the body.

So what is God trying to do by establishing a religion? To give you the gift of being prepared for your external environment. Giving is not just giving. It is to be given with great care. It is said that the monarch who controls the national luck of the country puts more than that of his devotion. It means that we have to risk our lives and put our devotion.

What happens when you put in your elaboration? God's grace is coming. Anyone who has ever lived a prayer life will know. Great and great strength comes when you live in prayer. That is why the eyes of the praying person see through the power of the physical world as well as the spirit world.

God came out of providence centering on a religious foundation in order to connect humans with the ideological right of supernatural reality. It stimulates the intrinsic emotions of human beings and arouses a desire to go into that sphere. Thus, he is trying to connect humans to the surreal line. It is religion that has done that.

That's why believers go on a path of faith saying that martyrdom will take place and even if they are cut off their heads. They're going that way even when they cross the line because they feel the surreal emotions that can transcend realistic emotions in a practically wide range. So, those who go this way must increase their humble power to 80 million. It means to have God there and increase your strength to strike the body.

When it comes to fighting, the power determines the victory or defeat. Religion is to prevent all unity caused by body desires and social needs in the world. Therefore, only religion that denies the reality of the whole can be said to be pure religion and ideal religion.

Religion is denial. That's why you have to throw it all away. It means to throw away what you eat, throw away what you sleep, and throw away everything you like. It is to give up lust, appetite, and sleep. It means to eat, sleep, and throw away everything you like. People must eat and sleep. And you have to like it. However, since all of them became the path of death through the flesh, it is to be expelled. Is to set a bomb on your body. Is to detonate an atomic bomb. It means to destroy them and take them all.

The body loves to be elevated and a comfortable seat. Also, I hate things that are bulging, and I like things that are plump, smooth, and fluffy. We shouldn't like what this body likes.

So, we have to like things that are inconsistent, stupid, stiff, etc. My body likes to be elevated and I like it if I eat well even if I take money from others. Others like it if they live well no matter what. So, you have to beat all those guts. It is to lower the body that likes to be elevated, to be meek and humble, to serve sacrifices. (18-66)
